Armstrong Trailer Park
North Orange Blossom Trail
Orlando, FL

Dear Resident,

EPA and Task Environmental will be working at the Chevron site and in your neighborhood during the week of April 17. The work will be done to address concerns raised at the community meeting held on March 9.

First, a concrete wall will be built at the northwest corner of the Site. This wall will prevent surface water flow from the Site to the trailer park. The concrete wall will replace the current plywood wall.

Secondly, more samples will be collected. Soil samples will be taken in the back corner of the trailer park. Contaminated soil was removed from this area last year. However, since your community asked for additional samples, we will collect some more. Groundwater samples will also be taken from the 26 monitoring wells at the Site and north of the Site. The samples will be analyzed by a lab in Florida. Some of the samples will also be tested by the EPA lab, like we have done before.

In addition, we are looking for a more convenient place to store the documents and sampling data for this Site. Currently, the documents are at the downtown Orlando Public Library. We have asked the Edgewater Branch Library to store the documents. If the branch library agrees to take the documents, then we will let you know when they are available at the new location.

If you have any questions, please contact myself or Rose Jackson at 1-800-435-9234.

Sincerely,

Randy Bryant
Senior Remedial Project Manager
South Superfund Remedial Branch
